

# TAKE CONTROL OF YOUR DISTRIBUTED NETWORK

Unleash the power of your business with enhanced speed, improved service quality, centralized control, and security, while reducing cost and complexity. With CLOUDWAN, you have unparalleled control and visibility over your distributed network. CLOUDWAN is a single solution that combines the speed and agility of SD-WAN, the consistency and control of NFV and network orchestration, and enables applications at the edge of your network.

With Zero-Touch Provisioning, it's as easy as 1 - 2 - 3 to be up and running with CLOUDWAN.

1. Deploy a CPE device to the location.
2. Someone onsite plugs in and powers on the box.
3. The box phones home, and can be activated by IT using the simple user interface.

Centralized device, network and user management is a breeze with the CLOUDWAN controller, which you access through a user interface, or via REST API.

## WHY CLOUDWAN?

CLOUDWAN is a next gen networking solution for your next gen business. CLOUDWAN drives the complexity and cost out of managing distributed enterprises. Supercharge your technology investments from digital transformation to secure dev ops. Take the pain out of deploying new sites, provisioning and managing new services, and delivering applications to users at the edge. CLOUDWAN is built and serviced by NTT, who has a strong reputation for innovation, high quality products, and services across the networking, communications and security industry.

With CLOUDWAN, you can:

- Achieve centralization and visibility across your distributed enterprise.
- Deliver applications and services at the edge.
- Improve your business bottom line by streamlining the deployment and management of your network, and reducing the amount of staff needed to manage it.
- Grow your business by focusing staff on strategic technology initiatives that drive revenue, instead of network management.
- Respond quickly to changing business conditions by taking the cost and complexity out of managing a distributed enterprise.
- Enable collaboration and information sharing across a distributed environment.

## FEATURES:

### ZERO TOUCH PROVISIONING

Rapid and cost-effective provisioning.

### EASY VPN

Secure connections with improved performance.

### HYBRID WAN

Use multiple WAN uplinks to steer packets based on the applications.

### FLEXIBLE INTERNET BREAKOUT

Reduces the cost of setting up internet access at each site.

### QUALITY OF SERVICES (QoS)

Classify priority traffic to reduce packet loss, jitter, and latency.

### SECURITY

Industry leading security.

### DASHBOARD

Centralized view & management across your distributed enterprise.

### REST API

Easily integrate CLOUDWAN with your existing services.

### MULTI-TENANT

Simplified management for Service Providers.

### CLOUD CONNECTOR

Enable your multi-cloud strategy, easily connect to popular clouds.

### NETWORK FUNCTION VIRTUALIZATION (NFV)

Reduce cost & complexity by replacing physical devices with virtual ones.
